

Younger kids love the curved desk

'EVEN FROM THE AGE OF THREE YEARS OLD, IT'S IMPORTANT TO OFFER CHILDREN AN EDUCATIONAL ENVIRONMENT'

54cm to 80cm in one successive movement. Its locking mechanism uses the Gas Lift and the patented Quick Release Lock (QRL), which allow lifting, lowering and locking with one hand, without the need for any complex mechanics. The table top's angle is as important as its height, and Nistulgrow's™ models can be adjusted from 0 to 35°, again in one swift movement. Lifting the handle starts the smooth adjustment, and letting go of it secures the angle in place.

Educational environment

Over the past 10 years, there have been many changes in children's education. One significant development is that they begin their learning journey at a much earlier stage. Even from as early as three years of age, it's important to offer children an 'educational environment' – beginning at home. Encouraging children to sit at their own desks helps to create this environment, giving them their own space to read, study, draw and develop their imagination.

ensuring children sit in the correct position from the beginning. Not only does this aid academic performance, it helps prevent future back-related issues, such as scoliosis or herniated discs.

Child-friendly design

Anti-scratch laminate protects the table top from marking by crayons, permanent inks and sharp-pointed pens, while the easy-to-clean aluminium pen tray prevents rubber erasers from sticking and permanent markers from causing chemical reactions. There's a sturdy top shelf that can withstand up to 100kg, strong enough for a computer monitor and heavy text books, while a foldaway book-stopper holds everything in place when the table top is tilted at an angle. Finally, rubber-edged, rounded corners keep children safe from injury.

Your child's early learning experiences and formal study will impact the rest of their life, so make sure you give them the start they deserve.

Ergonomics and sitting posture

Medical research has highlighted that while children are growing at a rate of more than 10cm a year, it's important that the furniture they use can be adjusted to their individual growth rates. Nistulgrow's™ ergonomic chairs come in a range of five bright colours, have a tilting backrest to support the lumbar spine and can easily be adjusted in height.

they adapt to kids' changing needs as they grow. Nistulgrow's™ desks have unique features you won't find on other height-adjustable desks.

Made to measure

The height of a desk not only affects your child's posture, and therefore her ability to work for longer periods, it also impacts on drawing and handwriting skills. That's why Nistulgrow™ has designed its desks so they can be adjusted from

Grow together, learn together

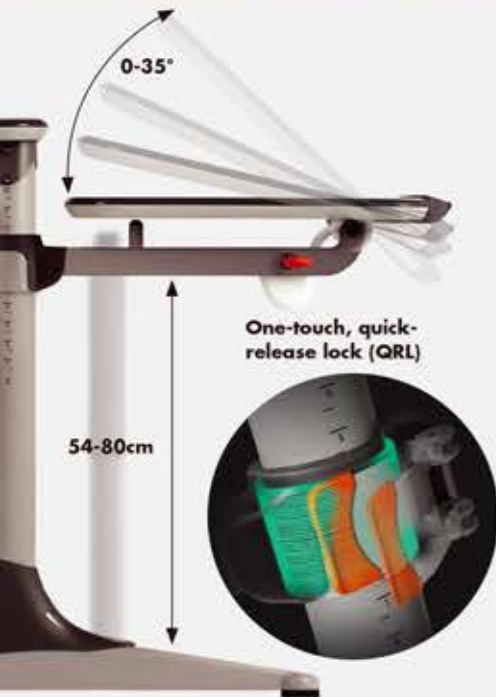

Give your child the best start in life with a Nistulgrow™ desk and chair set

Nistulgrow™ believes the environment in which a child learns is key to her educational development, so in 1994 set up a joint venture between people from the UK, Korea and Taiwan. Between them they developed and produced a range of ergonomically designed desks and chairs that will support the educational needs of your children throughout their school and college life.

Height-adjustable desks

Every parent knows that children are continually growing. In the same way your newborn needed larger babygrows after a just few months, or your toddler seemed to wear bigger shoes every season, children outgrow child-sized furniture. If you bought a fixed desk and chair for your child at five years old, by the time they reach seven, you'd need to buy another one.

Enter Nistulgrow's™ height-adjustable desks and chairs – designed for children from the age of five right through to adulthood. Not only do
